All cable terminals and controls are recessed at the rear of the speaker. Diecast finger holds positioned at the front of the speaker enclosure provide easy installation in tight cabinet spaces, supplied neoprene pads prevent scratching and allow for smooth slidein positioning of the speakers. Its driven by a powerful 300 watt amplifier, and controlled by Boston Acoustics proprietary BassTrac circuitry. Speaker level, line level, and LFE inputs provide connectivity to a wide range of audio systems. A frontmounted volume control combines with adjustments for phase and crossover point on the rear panel. In cabinet installations, the BT1100 can sit directly on the floor, isolating the subwoofer from the cabinet eliminating vibration. Bass vents into the room via the cabinet toekick. This eliminates the necessity for speaker grills at the bottom of the cabinet. From explosive music and pounding effects to the most artistic texturing and softest whispers, BTs extraordinary power handling and sensitivity allow extreme audio levels while preserving the subtlest details. All without the enormous speaker size and mass normally required for true big theater sound. Sound so detailed and dynamic, its utterly stunning. Clear and uncolored across the entire audio spectrum. This is the awardwinning, true to the original performance known as the Boston Sound. The BT1100 subwoofer was designed to complement the BT2 and BT1 high output LCR speakers. Every aspect has been thoroughly thought out for this application. All cable input terminals and controls are recessed at the rear of the speaker. The BT1100 subwoofer features a 12 inch DCD Deep Channel Design cast aluminum frame woofer with 2 inch voice coil. Its driven by a powerful 300 watt amplifier, and controlled by our proprietary BassTrac circuitry. Speaker level, line level, and LFE inputs provide connectivity to any audio system. A front mounted volume control is coupled with adjustments for phase and crossover point on the rear panel.

Bass is vented through a 3 inch tall slot located at the lower front of the Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. This is a straightforward but very detailed diagram of exactly what each area of the brain does. By way of instance, the left side of the brain is what we know as the logic of the mind and the ideal side is what we know as the logic of this entire body. If you consider it, this is the very first thing that comes to mind if we are attempting to comprehend complicated brain function. And you would believe the left side would be the logic of the brain and the right side would be the logic of your own human body. But if you knew that both sides operate in harmony and send information back and forth then maybe you could come to your own conclusions. The fact is there is no outside intelligence which makes up our mind and there is no extracorporeal mind which makes our body. Were all connected and that makes it feasible for us to function on an even keel and do things which make sense. These different areas of the brain which are identified by different letters that make up the diagram in the right hand column are what make up each portion of the mind. Then there are the flavor and smell, which the letters flavor or odor provide. Along with these, there is also a sixth feel known as jelling, which is more utilized in childhood than anything else. This feeling of touch joins to our bodies throughout the legs and arms and the face and voice. It supplies us with a degree of memory from remote ancestors of what every one of those limbs has been through previously.

A more specific explanation of exactly what every one of those senses is may be found in the diagram in the right hand column of this guide, although we know what every one of those senses is and how they work together, its very important to realize that their nature and function are a puzzle. But a clear picture of exactly what each of those regions of the brain do helps us find our way on earth. For instance, the experience of hearing may be based on the top half of this diagram and the experience of seeing about the bottom half of this diagram. So, if we are hearing, the top half of the diagram is telling us we are hearing, as we hear a sound coming out of somewhere. We see a sight

and the bottom half of the diagram tell us what is going on in the sphere of vision and whats present. These aspects of the sense of touch are the last facet of the brain which most individuals are aware of. But for people who have had direct experience of the feeling of touch, the lines that make up the diagram in the lower right hand corner along with the higher portion of the diagram tell us that we are not only hearing externally, but also are smelling and seeing too. By knowing the layers of the mind, we could better control the flow of information thats sent and received from different areas of the mind and how we use that information in our daily lives.
